INTRODUCTION

Thank you for selecting the 600W LED profile luminaire.

WARNING !

This product is not suitable for household use.

You now own a professional lighting unit that offers endless possibilities. Before installing, make sure that no damage was done to your luminaire during transport.

For your own safety and that of others, please read this instruction manual carefully before installing the unit. Anyone involved in installing, operating or servicing the 600W LED profile must:

- Be a qualified, authorized professional
- Strictly follow the instructions in this user manual.

Please take the time to read this manual carefully and thoroughly before installing and operating the luminaire. You should have a good knowledge of its operating conditions and all pertinent product information.

After you have become familiar with this manual, we recommend that you keep a copy for future use.

SAFETY INSTRUCTIONS

Please read the safety instructions and warnings in this manual carefully before installing and operating the 600W LED profile .

WARNING!

Risk of electric shock.

Use caution when handling. This luminaire requires high voltage, which can result in electric shock. The 600W LED profile left our factory in perfect working condition. However, if you notice a defect, immediately contact our factory before use.

Failure to observe the safety, installation or assembly instructions contained herein, or any modification made to the 600W LED profile will render the warranty null and void.

Check that the supply voltage does not exceed the maximum authorized limit. Check that your electrical installation complies with current standards.

In all cases, make sure that the power cables attached to your 600W LED profile have not been damaged due to cuts and splices or crushed in any way. Handle these cables with extreme caution while they are connected to a

power source.

Your 600W LED profile conforms to Class 1 safety standards. The unit must be grounded electrically. Make sure that the power source connected to your 600W LED profile is switched off before attempting any work on it.

Installation and connection to an electrical source must be performed by an authorized installer.

Our factory declines all responsibility should this luminaire be installed by an unqualified person.

Never disconnect your 600W LED profile by pulling on the power cable! First unlock the connector lock ring on the power cable until it is fully disengaged, and then gently pull on the connector to disconnect the cable.

Do not connect or disconnect the power cable of your 600W LED profile with wet hands.

At first use, your 600W LED profile may give off an odor. This is a normal occurrence that should dissipate after a few minutes of operation.

WARNING!

Do not connect or disconnect the power cable at your 600W LED profile if the cable is energized! This could cause arcing and damage your 600W LED profile , requiring repair.

Be careful to power off your 600W LED profile by removing the power plug from the source, before connecting or disconnecting the luminaire.

WARNING!

Never look directly into the lamps if lit or stand directly in line with the luminaire if close by. Installation, removal or replacement of the unit must be performed with power off to prevent any risk of glare and eye injury.

WARNING!

The fixture quickly becomes very hot during operation.

To avoid risk of burn, never handle or adjust the luminaire while it is energized and after it has been lit for more than 10 consecutive minutes. Some parts of the luminaire can reach a high temperature, particularly the body/radiator. Turn off the luminaire and wait for it to cool before handling.

CONDITIONS OF USE

Your 600W LED profile is a moving-head luminaire equipped with LED source intended for professional use (e.g., architectural, stage, television, theater, or museum lighting).

The 600W LED profile luminaire has an IP20 protection rating. It is intended strictly for indoor use. It must never be partially or fully submerged, even temporarily.

Condensation may form on your 600W LED profile in the following cases:

- Immediately after turning on the heating
- In places with fog or a high level of humidity
- When the luminaire is suddenly moved from a cold to a warm environment, or vice versa.

In such cases, you must wait until the luminaire readjusts to the ambient temperature of the room where it will be installed for operation.

Do not shake the 600W LED profile while installing or handling. Do not pull the 600W LED profile by one of its cables to move it. Lift the luminaire by its handles.

Choosing the appropriate place to install the 600W LED profile is essential. The following points should be observed:

- Do not expose it to a heat source.
- Do not install it near flammable materials.
- Be sure that dust or miscellaneous debris cannot clump around the body of the luminaire as this may interfere with its optimal cooling and proper operation.
- The 600W LED profile must be installed out of reach of the public and all persons not authorized to operate the luminaire.

We recommend a minimum distance of 5 m between the outside surface of the light and the illuminated object.

Due to the nature of its cooling principle, you should never prevent air from circulating around the body of the luminaire. You must provide a minimum clearance around your 600W LED profile to allow for cooling. The 600W LED profile can be installed in a ground pit or any other confined enclosure only under certain conditions. With this kind of installation, a system of forced ventilation should be used up to allow air to circulate freely around the luminaire(s). The air must be constantly renewed because the luminaire cannot be operated in closed system. Failure to comply with these requirements may destroy or prematurely wear the 600W LED profile, and our company cannot be held responsible.

No load should be placed on the 600W LED profile. The fixture must not be installed in such a way as to allow a person, vehicle or any object to run over or park on it.

Never lay or drop any hard, heavy, or blunt, objects on the 600W LED profile. This includes items made of glass or porcelain (e.g., bottles, dishware, or glass beads). The luminaire is made of materials such as plastic and extruded aluminum, making it resistant but not unbreakable. Objects made of hard materials such as steel or glass that fall on the unit may cause breakage of the plastic parts or the body. Our company cannot be held responsible for the luminaire's broken plastic parts or body, which are not covered under warranty.

The temperature of the room where the 600W LED profile is installed must never exceed 45°C (Ta = 45°C).

The 600W LED profile luminaire requires a 110-240 VAC supply voltage. Check that your luminaires have been installed for an application that is compatible with this information.

Check that the brackets on which you hang or attach your 600W LED profile can sustain the weight of the luminaire (30kg), taking into consideration all

necessary safety factors.

Do not use your 600W LED profile before being familiar with these recommendations and do not allow unqualified personnel to handle the product.

To transport your 600W LED profile, we strongly recommend that you use the complete original packaging, including the dense protective foam inserts.

If your 600W LED Profile is not being used for a long period, you should disconnect the luminaire from the power source.

Never dispose of the 600W LED profile in a rubbish bin.

PRESENTATION AND FEATURES

The 600W LED profile is a non-waterproof moving head wash light (IP20 protection rating) using the latest generation of high-performance of LED-type lamps.

This luminaire can be controlled remotely by an external DMX512 signal.

The 600W LED profile incorporates high power white LED source.

The luminaire requires from 36 to 58 DMX channels to be controlled via an external command system that sends a DMX512 signal (see below for details).

To adjust the settings on the 600W LED profile (i.e., DMX address, DMX operating mode and other options), a Remote Device Management (RDM)-type DMX controller may be required. The DMX RDM protocol is a universal, widely used standard.

A light console or any standard DMX-type controller is sufficient.

The 600W LED profile consists of a metal frame and plastic covers. The power connectors and DMX512 signal connectors are on the back of the fixture's base.

Dimension

INSTALLATION INSTRUCTIONS.

This luminaire should be installed by a qualified technician.

The fixture should be used in an environment with a temperature between -5°C and +45°C. Do not operate the luminaire outside this temperature range.

The luminaire must be hung so that the weight of this unit multiplied by 10 can be sustained for 1 hour without causing the suspension system or the supporting structure to be deformed.

The installation must always be secured at a second attach point, e.g., by a safety cable of the appropriate size.

Do not stand under the luminaire while it is being installed, dismantled or serviced.

The operator must ensure that a qualified technician has approved the installation of the luminaire for safety before it is first operated.

Installation should be inspected once a year by a qualified technician.

WARNING!

The installation of this luminaire must be validated by a qualified technician before it is used for the first time.

The luminaire should be installed in a location where the public cannot, touch, walk or sit on the luminaire.

Suspending the luminaire and/or installing it high up requires considerable experience, e.g., calculating load, selecting and adapting quality fastening materials, and periodically inspecting the entire installation. Without this skill and knowledge, do not attempt to install this unit by yourself. Improper installation may cause an accident resulting in personal injury or death.

WARNING!

The luminaire should be connected to an electrical source by a qualified electrician.

Before installing the luminaire make sure that the selected installation spot can support at least 10 times the weight of the unit. Connect the luminaire to the power source by the power cord.

ERROR MESSAGES

When you turn on the 600W LED profile , it will first perform an automatic reset

The display may show “Err channel is XX” indicating there is a problem with one or more of the channels. “XX” represents channel 1, 2, 3, 4, 5 or 6, which contain the testing sensor for positioning. For example, the message, “Err channel is Pan movement”, indicates an error in channel 1. If there is an error on channel 1 and channel 3 at the same time, the following error message may appear: “Err channel is Pan movement”, “Err channel is Tilt movement”. The system will flash twice, and the fixture will generate a second reset. If the error message persists after more than two resets, the channels showing errors will not work properly but the other channels will function normally.

Please contact our company for service and do not attempt to repair the luminaire yourself.

PAN- movement Er

(PAN-yoke movement error): This message will appear after the reset if the yoke’s magnetic-indexing circuit malfunctions (failed sensor or magnet missing) or the stepping-motor is defective (also caused by its driving IC on the main PCB). The PAN- movement does not return to the default position after the reset.

TILT- movement Er

(TILT-head movement error): This message will appear after the reset if the head’s magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepping-motor is defective (also caused by its driving IC on the main PCB). The TILT- movement does not return to the default position after the reset.

Technical parameter

Optics

Lamp: 600W White LED
CT: 8000K/6500K
Life: 20,000H
CRI: ≥ 74 or ≥ 90

Power

Max power consumption: 850W $Pf \geq 0.98$
Power supply: Electronic auto-ranging
Input voltage range: 100–240V, 50-60Hz

Movement

Pan movement: 540°/630° optional (16bit)
Tilt movement: 270° (16 bit)
Advanced motion system: auto repositioning, fast, quiet and smooth

Colors

CMY color mixing
CTO linear
CT1: 2700K~8000K CT2: 2700K~6500K
1 Color wheel: 7 dichroic filters + open

Gobos

1 Rotating gobo wheel: 6 interchangeable + open
1 Static gobo wheel: 7 + open

Features

Rotating prism: 5-facet prism
Focus : motorized focus
Shutter: electronic, variable from 1-25Hz or random
Dimming: 0-100% linear dimming
Frost: 0-100% linear adjustment
Zoom: 7°-42° linear zoom
Animation wheel: special dynamic flame or water effect, etc
Framing system: with 8 independent blades, full field travel with the ability to create different shapes Rotation of $\pm 45^\circ$

Display

LCD display with battery operated for fast addressing
15 second standby auto lock
Pan/ Tilt disengage (hold MENU and ENTER button)

Software

7 built-in program (optional)
Upgrades: fast and convenient using uploaded over DMX
Remote reset DMX address, fixture reset, sound control by DMX
Run time of LED engine and fixture
2 Control channel modes: 34/54 channels
Other Specification
Input signal isolation
Optional installed wireless receiver
Optional ArtNET control
RDM compatible
